👤 PROFESSIONAL PROFILE

Economist focused on firm modeling and empirical estimation in competitive environments. I combine quantitative analysis (Python, Stata) with the ability to communicate methodologies and findings to non-technical audiences, a skill developed through my university teaching role. I excel in autonomous problem-solving and the automation of analytical routines for positions in industrial organization (pricing, consulting, competition and mergers, commercial planning).

🎓 EDUCATION

- **BACHELOR'S DEGREE IN ECONOMICS**

Universidad Nacional de La Plata - In progress

- Senior year student (1 course remaining). GPA: 7.61

🎓 ACADEMIC AND TEACHING EXPERIENCE

- **Teaching Assistant for Statistics for Economists II**

Universidad Nacional de La Plata - 2025

- Assisted students in solving practical assignments, guiding the interpretation of statistical models and inference, and supported the teaching staff with the logistics and supervision of in-person evaluations.
- Outstanding performance with formal certification from the department and letter of recommendation available upon request.

🧩 SKILLS AND LANGUAGES

- Programming and Data Analysis: Python, Stata, SQL
- Tools and Environments: Git/GitHub, LaTeX
- Visualization and Business Intelligence: Power BI
- Office (Word, PowerPoint, Excel)
- Languages: Spanish (Native), English (Intermediate - B1)

🌐 HIGHLIGHTED PROJECTS

- Hedonic pricing and the cost of crime in CABA - Python, Stata (Group project)
 - Estimated the effect of insecurity on short-term rental prices in CABA using a panel data model (145,000+ observations). A 1% increase in crime is associated with a 0.062% decrease in price. [Project available on GitHub]
- Industrial organization models - Excel, Solver, VBA
 - Automated Cournot, Stackelberg, collusion, mergers (GUPPI, UPP, HHI), and price discrimination models, along with 15 other imperfect competition models, using VBA macros.
